MCP320X 12-Bit Analog-to-Digital Converters

Product Information

The Microchip MCP320X family of 12-bit analog-to-digital converters (ADCs) combines high performance and low power consumption in a small package – making it ideal for embedded control applications.

Consisting of the MCP3201, MCP3202, MCP3204 and MCP3208, the MCP320X family features a successive approximation register (SAR) architecture and an industry-standard SPI $^{\text{TM}}$ serial interface. Devices are available with 1, 2, 4 or 8 input channels and in PDIP, SOIC and TSSOP packages.

The MCP320X family offers existing Microchip customers added flexibility when incorporating analog inputs into their designs. The industry standard SPI interface allows 12-bit ADC capability to be added to any PICmicro® microcontroller. In addition, new customers will find the performance and price of the MCP320X family very attractive.

Applications for the MCP320X family include data acquisition, instrumentation and measurement, multichannel data loggers, industrial PCs, motor control, robotics, industrial automation, smart sensors, portable instrumentation and home medical appliances.

Features:

- 100k samples/second
- 1, 2, 4 or 8 channels
- Low Power: 500 nA typical standby, 400 μA typical active
- ±1 LSB INL, ±1 LSB DNL (B grade)
- No missing codes
- Industrial temperature range: -40°C to +85°C
- Single supply operation: 2.7V to 5.5V
- SPI serial interface
- PDIP and SOIC packages

Development Tool Support

Microchip is offering a comprehensive set of support tools including application notes and the Analog Evaluation System. The evaluation system consists of the analog evaluation driver board, incorporating a PICmicro microcontroller, coupled with an MCP320X device-specific evaluation board. Windows® -based software features powerful data collection and analysis capabilities, including Fast Fourier Transforms (FFT) and histograms.
